SKILL SET GO EDUTECH

LEARN. BUILD. PROVE.

Weekly Task Repository Management Format

A standardized GitHub repository structure for managing 4-week internship tasks, submissions, evidence, reports, and final capstone work.

4 WEEKS **16 CORE TASKS** **1 CAPSTONE**

Recommended use: One repository per intern per domain, organized into Week 1, Week 2, Week 3, and Week 4 folders. Each task folder should contain its own README, source work, evidence, and deliverables.

Designed around the Skill Set Go AI/ML 4-week roadmap, where interns progress from foundations to deep learning, GenAI, RAG, LangGraph, LangSmith, and a final AI agent capstone.

Submission Standard

Submissions should be original, clearly documented, and include the required evidence type such as source files, repository links, screenshots, written reports, notebooks, model files, or demo videos.

1. Recommended Repository Structure

Use the following structure as the standard folder layout for every intern. The AI/ML example below mirrors the four-week roadmap and can be adapted to all other internship domains.

Repository Tree

```
skillset-go-aiml-internship/
|
|-- README.md
|-- LICENSE
|-- requirements.txt
|-- .gitignore
|
|-- Week-1/
|   |-- Task-1.1-Python-Fundamentals/
|   |   |-- README.md
|   |   |-- src/
|   |   |-- notebooks/
|   |   `-- screenshots/
|   |-- Task-1.2-Data-Cleaning-EDA/
|   |   |-- README.md
|   |   |-- notebook.ipynb

```

Folder Rule

Every task folder should contain enough evidence for a reviewer to understand what was assigned, what the intern built, what tools were used, what the output was, and whether the task was completed.

2. Main README.md Format

The root README acts as the intern's dashboard. It should summarize intern details, weekly progress, task status, and final capstone links.

README.md Template

```
# Skill Set Go EduTech
## AI & Machine Learning Internship

### Intern Details
Name:
Offer Letter ID:
Domain: AI & Machine Learning
Batch:
Internship Duration:
GitHub Profile:
LinkedIn Profile:

---

## Internship Progress

| Week | Task | Status | Submission |
| Week 1 | Python Fundamentals | Completed | View |
| Week 1 | Data Cleaning & EDA | Completed | View |
| Week 1 | Math for ML | In Progress | - |
| Week 1 | Scikit-Learn Models | Pending | - |

---

## Weekly Progress
### Week 1 - Python, Mathematics & ML Foundations
### Week 2 - Deep Learning with PyTorch
### Week 3 - TensorFlow, GenAI & Prompt Engineering
### Week 4 - LangChain, LangGraph & AI Agents

---

## Final Capstone

## Skill Set Go EduTech
Learn. Build. Prove.
```

Recommended Status Labels

Status	Meaning
Completed	All required deliverables and evidence are uploaded.
In Progress	Work has started but the task is not ready for review.
Submitted	Task is uploaded and awaiting review or verification.
Revision Required	Reviewer feedback must be addressed before completion.
Pending	Task has not yet been started or submitted.

3. Individual Task README.md Format

Each task should have a small README that explains the objective, tools, completed work, deliverables, learning outcomes, and submission status.

Task README Template

```
# Task 1.2 - Data Cleaning & EDA

## Objective
Clean and analyse a real-world dataset using NumPy,
Pandas and Matplotlib.

## Tools Used
- Python
- Pandas
- NumPy
- Matplotlib
- Jupyter Notebook

## Work Completed
1. Loaded the dataset
2. Checked missing values
3. Removed/handled duplicate records
4. Performed exploratory data analysis
5. Created visualizations
6. Documented observations

## Deliverables
- Jupyter Notebook
- Cleaned Dataset
- Data Visualizations
- Screenshots

## Key Learnings
Write 3-5 points describing what you learned.

## Submission Status
Status: Completed
Submitted On:
```

4. Repository Naming Standard

For internal verification, use a predictable naming convention:

SSG-[DOMAIN]-[OFFER-ID]-[NAME]

Internal example: SSG-AIML-SSG-AIML-B1-0002-Parth-Angare

Public-profile alternative: skillset-go-aiml-internship-parth-angare

5. Review Checklist

- Root README is updated with current task status.
- Every task folder contains a task-specific README.
- Code, notebooks, datasets, screenshots, and reports are placed in clearly named folders.
- Large model files or datasets are handled appropriately and not uploaded unnecessarily.
- All external links and demo links are working.
- Final capstone includes repository, demo, report, and presentation evidence.
- No copied or undocumented work is submitted.
